Turbo Mode: Accelerating Combustion Simulations with Machine Learning

Bryce Barclay
Computing/DSI
Russell Whitesides and Simon Lapointe
Why Combustion Simulations?

- Transportation still relies on combustion engines
- Fuel efficiency research requires simulation of complex chemistry (100’s of chemicals)
  - **Goal**: reduce simulation cost
Autoencoding Chemical States

Reduce the number of equations using machine learning:

- **In:** chemical concentrations
- **Out:** chemical concentrations
- **Encoded:** lower dimensional representation of chemical state
Training and Results

- Train autoencoder on 1 million combustion examples
- Minimize mean error and total mass error
